Project :- Scratch Mini Game

1.) What your game does :-

- **Description :-** My game is survival type game and the player control character of the game ad collect diamonds and in game include fire marks and dragons and player need to avoid them to win the game
- **Goal** :- The player needs to collect more than 20 diamonds before time end .and need to survive from the dragon if character touch the dragon game will be over.
- **Win/Lose** :- If the times run out and the player score is greater than 20 ,player is wind and if player score is less than 20 or if player touches dragon player will be lose.

2.) How it works :-

- Sprites :- I used several characters for this game .main character (pico),dragons,fire marks,diamonds.
- Control :- The character controlled by arrow keys (up,down,left,right)
- Score & Timer :- I introduced two variables time and points,points for score (+2 for diamond and -1 for fire mark and time for countdown)
- Loop :- I use forever loop for character movements and dragons activity and used repat until loop for time countdown
- Conditions :- Use if conditions to collisions between character and others / used if else to identify user win or lose based on final points
- Visual & Sounds :- I added background musics for gain diamonds ,touch with fire marks and touch with dragons

3.) What I learned

I learned to add new sprites from the local locations and intrenet and learned to how add logics (if conditions,if /else conditions) and I learned to add loops to the game and specially I learned to create game with my own script and my own mehcanis,
